Mohamad Shoumar

Backend Engineer

shoumar.mohamad1@gmail.com | LinkedIn | GitHub | Beirut, Lebanon

Professional Experience

CoinQuant, Abu Dhabi Sept 2025 - Present
Team Lead

- Architected a scalable, event-driven backtesting platform on AWS Lambda and SQS running 800+ concurrent Python jobs with zero production failures. Incorporated failure handling: SQS dead-letter queue with redrive, idempotent PostgreSQL result writes with retry and backoff and idempotent credit refunds.
- Built a comprehensive test suite covering the full testing pyramid, creating quality gates that let the team move toward agentic engineering loops while preserving code quality and maintainability.
- Designed and implemented a slippage model that improves backtest realism and trading cost accuracy.
- Led development of a multi-position scaling feature, enabling advanced position sizing strategies.
- Lead a team of 5 engineers through sprint planning, code reviews, and a strict unit and integration testing culture.

CoinQuant, Abu Dhabi Aug 2024 - Aug 2025
Backend Developer

- Led the microservices packaging migration from Bazel to Poetry, simplifying dependency management and reproducible builds across internal Python services.
- Established a standardized local development workflow, reducing environment setup and iteration time for the backend team.

CoinQuant, Abu Dhabi Jun 2023 - Jul 2024
Full Stack Developer

- Designed and implemented RESTful APIs in Python for the backtesting platform, delivering market and simulation data to the product frontend.
- Built the backtesting platform user interface from scratch, turning a backend-only tool into a product used across the team.

Projects

Job Hunter — GitHub

- Built a Python job discovery system aggregating daily listings from **10 job boards**, using regex, rule-based filtering, deduplication, and LLM verification to identify relevant remote opportunities.
- Developed AI-powered CV and cover letter tailoring using Claude and DeepSeek, with automated validation that prevents fabrications or hallucinations.

Skills

Languages: Python, SQL, TypeScript, JavaScript
Frameworks: Django, FastAPI, Node.js, React, Next.js, React Native
Databases: PostgreSQL, MongoDB, Firebase
Tools & Platforms: AWS (Lambda, SQS), Docker, Git, Datadog, Grafana
Concepts & Methodologies: API design, async programming, serverless architecture, event-driven architecture, message queues, data integration, microservices, LLM/AI automation, unit & integration testing, TDD, Agile/Scrum

Education

Software Engineering Factory, Full Stack Software Engineering Bootcamp Nov 2022 - May 2023

- Completed the boot camp as a Star Developer with a Full stack web app.

American University of Beirut, Psychology Sep 2018 - Jun 2021

Certifications

Software Engineering Factory, Applied AI Engineering Workshop Sep 2026

- Built a support agent with tool calling, RAG, structured outputs, evaluations, and human approval gates.

Zapier Academy, AI Builder Path Mar 2026

- Built multi-step Zaps with AI steps, webhooks, scheduling, and Zapier Tables to move data between business tools.
